28266 Beck Road, Wixom MI 48393

## Preparing for Gauge Bezel

1. Open ashtray to access area for center stack bezel removal (it is helpful to use a hook tool to dislodge the first clip).

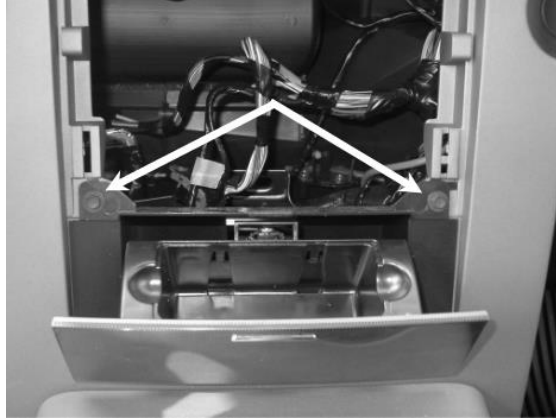

2. Grasp the center stack bezel and pull outward to dislodge clips.

**Note: Use care when pulling on the bezel, the clips are difficult to dislodge. Be careful not to over bend the stack causing a crack.**

3. Unplug the wires for the Lighter, Ventilation Controls and the Air Bag Light and set center stack aside.
4. Remove the two – 7mm head screws that secure the ashtray to the dash panel, save screws for reinstallation.

### **Installing Gauge Bezel**

5. Install gauges into the Bezel and make connections per gauge manufacturers directions.
6. With gauges in place, attach the Gauge Bezel to the dash using the two screws removed in step #4.

### **Reassemble Center Stack**

7. Reconnect the wires for the Lighter, Ventilation Controls and the Air Bag Light to the backside of the center stack.
8. Align the clips of the center stack with receivers on the dash and snap center stack back into place.
